

## ABSTRACT AMENDMENT

Please amend the abstract as follows:

A method is performed on a first server for communicating with a mobile station in order for the mobile station to update a security-related parameter.

The method ~~comprises~~ includes determining that a request expressed in a first protocol has been made by a second server for updating the security-related parameter on the mobile station. In response to the determination, the request is packaged in a message expressed in a second protocol and is communicated to the mobile station. Another method is disclosed that is performed on a mobile station for updating a security-related parameter. The method ~~comprises~~ includes receiving a message that is expressed in a first protocol from a server and that ~~comprises~~ includes a request for the mobile station to update the security-related parameter. The request is expressed in a second protocol. In response to the message, at least one operation is performed in order to update the security-related parameter.
